

# Luca Tozzini

Full-stack Developer | me@lucatozzini.com | [LinkedIn](#)

## Technical Skills

- Languages: Javascript/Typescript, Python, Java, SQL, HTML, CSS
- Databases: PostgreSQL, MySQL, SQLite
- Technologies: Node.js, React, LangChain/LangGraph, MQTT, JWT, mDNS, REST API, WebSocket, TCP/IP, Git
- Libraries & Services: Express.js, Sequelize, jQuery, Bcrypt, Auth0, Stripe, AWS, Google Cloud Platform

## Work Experience

### RenoFiz (MindFutura Technologies Inc.)

Co-founder & Full Stack Developer

Vancouver, BC

Sep 2025 - Present

- Engineered a highly accurate AI agent harness using Node.js, LangChain, and LangGraph, utilizing PostgreSQL for persistent agent checkpointing and relational user data to achieve 95% fact-collection accuracy.
- Developed the core platform architecture with a React.js web app and an Express.js REST API, integrating Auth0 for identity management and Stripe for secure payment processing.
- Secured public-facing AI endpoints by implementing strict rate limits and reCAPTCHA to protect against automated abuse.
- Built an internal AI-driven software factory (integrating Linear, GitHub, Claude, and Codex) alongside a custom Gemini/OpenAI evaluation harness to ensure output reliability, accelerating average issue-to-PR cycle times by 40%.
- Validated core AI capabilities by deploying a white-labeled automated intake pilot for Vancity Electric, successfully routing 10 new jobs per month prior to scaling proprietary, in-house traffic.
- Implemented an internal AI agent to automate SEO workflows, driving an organic spike in daily site impressions from 10 to 300 within two weeks at zero ad spend, supported by Static Site Generation (SSG) indexing techniques.

### DataAnnotation

AI Quality Assurance (freelance)

Remote

July 2024 - Present

- Crafted advanced prompts to challenge AI models in generating, editing, and explaining code, identifying flaws in the process.
- Reviewed and edited AI-generated Python, SQL, Javascript, HTML, and Java code, addressing syntax, logic, and formatting errors to enhance quality.
- Scored model responses based on defined criteria, providing detailed written feedback to improve model performance.
- Evaluated AI models for safety, correctness, and overall quality, ensuring reliable outputs in diverse coding tasks.

### Solaires

Full Stack Developer (Co-op)

Victoria, BC

Jan 2025 - Sep 2025

- Developed a secure backend server using Node.js and Express.js, implementing JWT and Bcrypt for robust user authentication and management.
- Integrated an MQTT broker with the backend, including authentication, to facilitate real-time communication with IoT devices.
- Collaborated on a new web application using Vue.js for the frontend and a Flask server, creating a seamless user interface.
- Engineered firmware for ESP32 devices to enable secure HTTPS registration and MQTT connectivity for sending sensor data to the Node.js server.
- Managed and maintained a PostgreSQL database to store user credentials, IoT device information, and sensor data.
- Migrated the company website's contact page, integrating reCAPTCHA and the Email.js service for enhanced security and functionality.

## Education

### University of Victoria

Bachelor of Science in Computer Science (BSc)

Victoria, BC

Sep 2021 - Dec 2026
